FOR IMMEDIATE RELEASE
August 27, 2011

National Weather Service Honors Senator LeRoy Loudon for Outstanding Service to Volunteer Cooperative Weather Observer Program

Recognizing more than 43 years of dedication as a volunteer weather observer, NOAA's National Weather Service has named State Senator LeRoy Loudon a 2011 recipient of the agency's John Campanius Holm Award. This prestigious award is presented to deserving cooperative weather observers around the country.

"Cooperative observers are the bedrock of weather data collection and analysis," said Brian Hirsch, meteorologist-in-charge of NOAA's North Platte National Weather Service forecast office. "Numerous technological breakthroughs have brought great benefits to the nation in terms of better forecasts and warnings. But without the century-long accumulation of accurate weather observations taken by volunteers, scientists could not begin to adequately describe the climate of the United States. We cannot thank Sen. Loudon enough for his many years of service to America."

Hirsch will present the award during a ceremony at the Alliance Public Library at 2 p.m. on Aug. 27. Observing Program Leader Steve Carmel nominated Sen. Loudon for the Holm Award.

Sen. Loudon became the Ellsworth, Neb., observer on Feb. 1, 1968, reporting daily precipitation data, including snowfall and snow depth to the National Weather Service North Platte office. Site reports have provided important data to NOAA forecasters, hydrologists and climate scientists. Over the years, Sen. Loudon has provided nearly 15,500 daily reports to the National Weather Service.

Long and continuous records provide an accurate picture of a locale's normal weather and give climatologists and others a basis for predicting future trends. These data are invaluable for scientists studying floods, droughts and heat and cold waves. At the end of each month, observers submit these records to NOAA, and they become part of the nation's official climate record for temperature and precipitation.

The first extensive network of cooperative stations was established in the 1890s as a result of an 1890 act of Congress that created the U.S. Weather Bureau. Many of the stations

have even longer histories. John Campanius Holms' weather records, taken without benefit of instruments in 1644 and 1645, are the earliest known recorded observations in the United States.

Many historic figures have maintained weather records, including Benjamin Franklin, George Washington and Thomas Jefferson. Jefferson maintained an almost unbroken record of weather observations between 1776 and 1816, and Washington took weather observations just a few days before he died. The Jefferson and Holm awards are named for these weather observation pioneers.

The National Weather Service's Cooperative Weather Observer Program is a unique partnership between the National Weather Service and citizen volunteers in every U.S. state and territory. The cooperative observer program has given scientists and researchers continuous weather data since the program's inception in 1890. Today, more than 11,000 volunteer observers participate in the nationwide program to provide daily reports on temperature, precipitation and other weather factors such as snow depth, river levels and soil temperature.

NOAA's National Weather Service is the primary source of weather data, forecasts and warnings for the United States and its territories. NOAA's National Weather Service operates the most advanced weather and flood warning and forecast system in the world, helping to protect lives and property and enhance the national economy.
